AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application.

LISTING OF CLAIMS:

1(currently amended). A combination pastry support and server comprising a substantially rigid, formed, sheet having ~~an~~ a substantially planar intermediate portion adapted to engage a major part of the planar, radial, surface of one exposed end of a remainder sector of a circular article of pastry, said intermediate portion having first and second, parallel opposite edges, a first, substantially planar, flange, unitary with said intermediate portion, and extending transversely, relative to said intermediate portion, in a first direction from said first edge, and a second, substantially planar, flange, unitary with said intermediate portion, and extending in a second direction, opposite to said first direction, from said second edge, the included angle between each said flange and said intermediate portion being, at most, 90°, whereby said intermediate portion can be in face-to-face engagement with a planar, radial, surface of an exposed end of a remainder sector of a circular article of pastry, while one of said flanges is disposed underneath, and in facing engagement with, a bottom of said remainder sector, and said first and second flanges can be used interchangeably, respectively, as a handle, and as a support for lifting a serving portion of the pastry article, and in which each of

said flanges has an outer edge oblique relative to said intermediate portion, whereby each flange is tapered.

2(currently amended). A combination pastry support and server according to claim 1, in which ~~each of the first and second~~ substantially planar flanges ~~has opposite surfaces at least major portions of which are planar and parallel, and in which the planar major portions of the surfaces of both of the first and second flanges are~~ disposed in parallel planes.

3(previously presented). A combination pastry support and server, comprising a substantially rigid, formed, sheet having an intermediate portion adapted to engage a major part of the surface of one exposed end of a remainder sector of a circular article of pastry, said intermediate portion having first and second, parallel opposite edges, a first flange, unitary with said intermediate portion, and extending transversely, relative to said intermediate portion, in a first direction from said first edge, and a second flange, unitary with said intermediate portion, and extending in a second direction, opposite to said first direction, from said second edge, whereby said first and second flanges can be used interchangeably, respectively, as a handle, and as a support for lifting a serving portion of the pastry article, in which each of the first and second flanges has opposite surfaces at least major portions of which are planar and parallel, and in which the planar major portions of the surfaces of both of the first and second flanges are parallel, and in which the intermediate portion also has parallel, planar, opposite

surfaces, and in which the planar major portions of each of the flanges are disposed at an acute angle relative to said planar surfaces of the intermediate portion.

4(previously presented). A combination pastry support and server according to claim 3, in which the planar major portions of each of the flanges are disposed at an angle of approximately 88 degrees relative to said planar surfaces of the intermediate portion.

5(previously presented). A combination pastry support and server according to claim 1, in which the outer edge of each of said flanges is spaced from said intermediate portion, each said outer edge having a first end and a second end, the distance from each said first end to said intermediate portion being greater than the distance from each said second end to said intermediate portion.

6(currently amended). A combination pastry support and server comprising a substantially rigid, formed, sheet having ~~an~~ a substantially planar intermediate portion adapted to engage a major part of the planar, radial, surface of one exposed end of a remainder sector of a circular article of pastry, said intermediate portion having first and second, parallel opposite edges, a first, substantially planar, flange, unitary with said intermediate portion, and extending transversely, relative to said intermediate portion, in a first direction from said first edge, and a second, substantially planar, flange, unitary with said intermediate

portion, and extending in a second direction, opposite to said first direction, from said second edge, the included angle between each said flange and said intermediate portion being, at most, 90°, whereby said intermediate portion can be in face-to-face engagement with a planar, radial, surface of an exposed end of a remainder sector of a circular article of pastry, while one of said flanges is disposed underneath, and in facing engagement with, a bottom of said remainder sector, and said first and second flanges can be used interchangeably, respectively, as a handle, and as a support for lifting a serving portion of the pastry article, in which each of said flanges has an outer edge spaced from said intermediate portion, said outer edge having a first end and a second end, the distance from said first end to said intermediate portion being greater than the distance from said second end to said intermediate portion, and in which the outer edge of each of said flanges is substantially straight and oblique relative to said intermediate portion, whereby each of said flanges has a trapezoidal shape.

7(previously presented). A combination pastry support and server comprising a substantially rigid, formed, sheet having an intermediate portion adapted to engage a major part of the surface of one exposed end of a remainder sector of a circular article of pastry, said intermediate portion having first and second, parallel opposite edges, a first flange, unitary with said intermediate portion, and extending transversely, relative to said intermediate portion, in a first direction from said first edge, and a second flange, unitary with said

intermediate portion, and extending in a second direction, opposite to said first direction, from said second edge, whereby said first and second flanges can be used interchangeably, respectively, as a handle, and as a support for lifting a serving portion of the pastry article, in which each of said flanges has an outer edge spaced from said intermediate portion, said outer edge having a first end and a second end, the distance from said first end to said intermediate portion being greater than the distance from said second end to said intermediate portion, in which each of said flanges has longer and shorter edges, both meeting and extending from said intermediate portion, and in which said longer edge of the first flange meets said intermediate portion at a location diagonally opposite a location at which said longer edge of the second flange meets said intermediate portion.

8(currently amended). A combination pastry support and server according to claim 1 ~~comprising a substantially rigid, formed, sheet having an intermediate portion adapted to engage a major part of the surface of one exposed end of a remainder sector of a circular article of pastry, said intermediate portion having first and second, parallel opposite edges, a first flange, unitary with said intermediate portion, and extending transversely, relative to said intermediate portion, in a first direction from said first edge, and a second flange, unitary with said intermediate portion, and extending in a second direction, opposite to said first direction, from said second edge, whereby said first and second flanges can be~~

~~used interchangeably, respectively, as a handle, and as a support for lifting a serving portion of the pastry article,~~  
in which said sheet is optically transparent and composed of a polycarbonate resin.

9(previously presented). A combination pastry support and server according to claim 5, in which each of said flanges has longer and shorter edges, both extending from said intermediate portion to its said outer edge, and in which at least said outer edge is beveled.

10(previously presented). A combination pastry support and server according to claim 5, in which each of said flanges has longer and shorter edges, both extending from said intermediate portion to its said outer edge, and in which said outer edge of each flange, and at least a part of each of said longer and shorter edges extending from said outer edge, are beveled.

11(currently amended). A combination pastry support and server comprising a substantially rigid, formed, sheet having ~~an~~ a substantially planar intermediate portion adapted to engage a major part of the planar, radial, surface of one exposed end of a remainder sector of a circular article of pastry, said intermediate portion having first and second, parallel opposite edges, a first, substantially planar, flange, unitary with said intermediate portion, and extending transversely, relative to said intermediate portion, in a

Amendment dated: October 12, 2005  
Reply to Office action of July 28, 2005

first direction from said first edge, and a second, substantially planar, flange, unitary with said intermediate portion, and extending in a second direction, opposite to said first direction, from said second edge, the included angle between each said flange and said intermediate portion being, at most, 90°, whereby said intermediate portion can be in face-to-face engagement with a planar, radial, surface of an exposed end of a remainder sector of a circular article of pastry while one of said flanges is disposed underneath, and in facing engagement with, a bottom of said article of pastry, and said first and second flanges can be used interchangeably, respectively, as a handle, and as a support for lifting a serving portion of the pastry article, in which each of said flanges has an outer edge oblique relative to said intermediate portion, whereby each flange is tapered, and in which said first and second flanges are tapered in opposite directions.

12(previously presented).      A combination pastry support and server according to claim 1, in which said intermediate portion is rectangular.

13(previously presented).      A combination pastry support and server comprising:

a substantially rigid, formed, sheet having an  
intermediate portion adapted to engage a major part  
of the surface of one exposed end of a remainder  
sector of a circular article of pastry, said  
intermediate portion having first and second,

Application No.: 10/725794  
Amendment dated: October 12, 2005  
Reply to Office action of July 28, 2005

parallel opposite edges, a first flange, unitary with said intermediate portion, and extending transversely, relative to said intermediate portion, in a first direction from said first edge, and a second flange, unitary with said intermediate portion, and extending in a second direction, opposite to said first direction, from said second edge, whereby said first and second flanges can be used interchangeably, respectively, as a handle, and as a support for lifting a serving portion of the pastry article;

in which each of the first and second flanges has opposite surfaces at least major portions of which are planar and parallel, and in which the planar major portions of the surfaces of both of the first and second flanges are parallel;

in which the intermediate portion also has parallel, planar, opposite surfaces;

in which the planar major portions of each of the flanges are disposed at an acute angle relative to said planar surfaces of the intermediate portion; and

in which each of said flanges has an outer edge spaced from said intermediate portion, said outer edge having a first end and a second end, the distance from said first end to said intermediate portion being greater than the distance from said second end to said intermediate portion.

Application No.: 10/725794  
Amendment dated: October 12, 2005

14(previously presented). A combination pastry support and server according to claim 13, in which each of said flanges has longer and shorter edges, both meeting and extending from said intermediate portion, and in which said longer edge of the first flange meets said intermediate portion at a location diagonally opposite a location at which said longer edge of the second flange meets said intermediate portion.

15 (previously presented). A combination pastry support and server comprising:

a substantially rigid, formed, sheet having an intermediate portion adapted to engage a major part of the surface of one exposed end of a remainder sector of a circular article of pastry, said intermediate portion having first and second, parallel opposite edges, a first flange, unitary with said intermediate portion, and extending transversely, relative to said intermediate portion, in a first direction from said first edge, and a second flange, unitary with said intermediate portion, and extending in a second direction, opposite to said first direction, from said second edge, whereby said first and second flanges can be used interchangeably, respectively, as a handle, and as a support for lifting a serving portion of the pastry article;

in which each of the first and second flanges has opposite surfaces at least major portions of which

Application No.: 10/725794  
Amendment dated: October 12, 2005  
Reply to Office action of July 28, 2005

are planar and parallel, and in which the planar major portions of the surfaces of both of the first and second flanges are parallel;  
in which the intermediate portion also has parallel, planar, opposite surfaces;  
in which the planar major portions of each of the flanges are disposed at an acute angle relative to said planar surfaces of the intermediate portion;  
in which each of said flanges has an outer edge oblique relative to said intermediate portion, whereby each flange is tapered; and  
in which said first and second flanges are tapered in opposite directions.

16(previously presented). A combination pastry support and server according to claim 1, in which said first and second flanges are tapered in opposite directions.
